

Column Sentry®

FIT

When it all
comes
together

Always on guard

Unlike traditional two-sided column protectors, the FIT is a system of four uniform sides that fit together like the pieces of a puzzle. The result? A tight, secure fit around square, rectangular or round columns.

Corner-to-corner protection

The patented Column Sentry FIT column protector is a revolutionary engineering solution that addresses the challenge of variable column sizes. Featuring four interlocking sides that slide into place, the FIT adjusts to fit every column. No more guessing at sizes or finding the "closest" size.

Sizes

Small FIT – adjusts to fit columns between 4" x 4" (100x100mm) up to 8" x 8" (200x200mm) in size. Dimensions are 16" x 16" x 42" and weight is 31 lbs.

Medium FIT – adjusts to fit columns between 8" x 8" (200x200mm) up to 12" x 12" (300x300mm) in size. Dimensions are 20" x 20" x 42" and weight is 48 lbs.

The difference is in the design

The sides of the FIT align to provide even, corner to corner protection. That means that regardless of the column size, the depth of the safety zone for the FIT stays the same. Whether expanding or contracting the pieces of the FIT, each side continues to provide the same air cushioned protection all the way around the column. The four-sided design also eliminates any stiff spots on the column protector.

Patented air chamber

Like the original Column Sentry®, the FIT features the patented air chamber to deflect impact energy away from the column and minimize the force of tow motor impact.

Installation

- 1) Position the 4 pieces of the Column Sentry FIT around the column.
- 2) Slide 2 each together, until you have 2 equal sides
- 3) Slide those "halves" toward each other, sliding the parts together or apart, until it fits the column tightly.
- 4) Wrap the finished column protector with the included 2-sided VELCRO® straps.

The Column Sentry FIT is set and ready for action
